Paired-branching design (schematic, no data)
T0 = 100: established-regime checkpoint
Trunk, periods 1-100 (from scratch)
4 LLM dealers + 10,000-agent swarm; 12 seeds;
qualified if price and profit index >= 0.30 on 71-100
established window 71-100
101-110 transition
sham
no change: the zero point of every contrast
sham2
second independent sham (fresh draws): noise band
lever
L1 routing, L2 fringe, L3 tick, L4a view, L5 async,
L6 entry, L7 speed bump (one branch each)
ghosts
each live dealer with fresh draws, rivals replayed
open-loop from the sham: no feedback from the live dealer
probes
entrants L6b / L6c, replacement R1 / R2 / R4,
sting S1 / S2 (6 trunks)
Scripted competitive market (SC1, 20 seeds): MQC;
frozen-quote replay (CPU, 0 LLM calls)
evaluation window 111-150
Paired contrast per trunk: dC_p = capped Delta_p(sham) - capped Delta_p(lever), 11 qualified trunks.
